SUPERVISOR (NAME AND E-MAIL)

Professor Ricardo Franco
ricardo.franco@fct.unl.pt

SHORT CV OF THE SUPERVISOR

José RICARDO Ramos FRANCO Tavares (<https://orcid.org/0000-0002-5139-2871>) is an Associate Professor, with Habilitation in Physical Biochemistry, at Department of Chemistry, NOVA School of Sciences and Technology, NOVA University of Lisbon, Portugal. He is a researcher at Applied Molecular Biosciences Unit (UCIBIO-REQUIMTE) in the Research Group Nano-Immuno Tech. He obtained his PhD in Chemistry, at the NOVA University of Lisbon, in 1995, in Bioinorganic Chemistry. He then had post-doctoral stays on Protein Biochemistry and Spectroscopy at TiHo, Hannover, Germany, with Dr. Juan Calvete, to which he was recipient of a Alexander von Humbolt scholarship; and at the College of Medicine, University of South Florida, USA, with Prof. Gloria Ferreira. From several post-doctoral stays with Prof. John Shelnett at the Sandia National Laboratories and University of New Mexico, USA, he started a new research area in Bioanotechnology and Raman spectroscopy. In 2003-2004 he was Head of the Raman Spectroscopy Laboratory at ITQB-NOVA, Portugal. His current scientific interests are i) development of molecular diagnostic rapid tests (point-of-care), based on gold nanoparticles to detect specific nucleic acid sequences, antigens or antibodies for diseases such as tuberculosis, malaria, fungal infections, or metabolic diseases; ii) development of bio-functionalized gold and silver nanostructured surfaces and nanoparticles for superior detection sensitivity by Surface Enhanced Raman Spectroscopy (SERS); iii) physical-chemistry of bio/non-bio interactions, e.g., antigens/antibodies/enzymes with gold nanoparticles. He is co-author of 76 articles with an h-index of 31, and 2688 citations as of June 2021. He was the supervisor of 6 post-doctoral researchers, 4 Ph.D. students and co-supervised another 4. He supervised/co-supervised 29 M.Sc. students. He participated in five FCT/MCTES financed research projects, three as PI.

5 SELECTED PUBLICATIONS

1. Design and simple assembly of gold nanostar bioconjugates for Surface-Enhanced Raman Spectroscopy immunoassays
Maria João Oliveira, Miguel P. de Almeida, Daniela Gomes, Elvira Fortunato, Rodrigo Martins, Eulália Pereira, Hugh Byrne, Hugo Águas and Ricardo Franco
Nanomaterials (2019), **9** (11), 1561, DOI: 10.3390/nano9111561
2. Development of a gold nanoparticle-based lateral-flow immunoassay for *Pneumocystis pneumonia* serological diagnosis at point-of-care

Ana Luísa Tomás, Miguel P. de Almeida, Fernando Cardoso, Mafalda Pinto, Eulália Pereira, Ricardo Franco and Olga Matos

Frontiers in Microbiology (2019), **10**, 2917, DOI: 10.3389/fmicb.2019.02917

3. Office paper decorated with silver nanostars - an alternative cost effective platform for trace analyte detection by SERS

Maria João Oliveira, Pedro Quaresma, Miguel Peixoto de Almeida, Andreia Araújo, Eulália Pereira, Elvira Fortunato, Rodrigo Martins, Ricardo Franco and Hugo Águas
Sci. Rep. (2017) **7**, 2480, DOI:10.1038/s41598-017-02484-8

4. Star-shaped magnetite@gold nanoparticles for protein magnetic separation and SERS detection

Pedro Quaresma, Inês Osório, Gonçalo Doria, Patrícia A. Carvalho, André Pereira, Judith Langer, João Pedro Araújo, Isabel Pastoriza-Santos, Luis M. Liz-Marzán, Ricardo Franco, Pedro Baptista and Eulália Pereira
RSC Adv. (2014), **4** (8), 3659 – 3667, DOI: 10.1039/c3ra46762g

5. Gold nanoparticle-based fluorescence immunoassay for Malaria antigen detection

B. Guirgis, C. Sá e Cunha, I. Gomes, M. Cavadas, I. Silva, G. Doria, G. Blatch, P.V. Baptista, E. Pereira, H. Azzazy, M. Mota, M. Prudêncio and R. Franco
Anal. Bioanal. Chem. (2012), 402, 1019–1027, DOI: 10.1007/s00216-011-5489-y

PROJECT TITLE AND SHORT DESCRIPTION

NANOIMMUNOSERS

The development of robust and sensitive point-of-care testing platforms is necessary to improve patient care and outcomes. Surface-Enhanced Raman Scattering (SERS)-based immunosensors are especially suited for this purpose. The objective of this Project is to address the three main challenges for application of SERS-based immunosensors at point-of-care, namely, increased reproducibility, sensitivity, and specificity. Our approach and efforts have been at two levels of a typical sandwich design: (i) plasmonic gold nanoparticles and their interaction with the detection antibodies to form robust and stable bioconjugates; (ii) capturing platform, namely by tailoring its plasmonic properties and the immobilization of capturing antibodies. We are a leading research group on the application of bionanotechnology to biosensors and will work closely with the candidate to elaborate a detailed Project in the context of SERS-based immunosensors and taking into consideration their scientific goals.

SCIENTIFIC AREA WHERE THE PROJECT FITS BEST*

Chemistry (CHE)
