

MARIE SKŁODOWSKA-CURIE POSTDOCTORAL FELLOWSHIPS 2025 EXPRESSION OF INTEREST FOR HOSTING MARIE CURIE FELLOWS

HOST INSTITUTION

NOVA Information Management School (NOVA IMS), Universidade Nova de Lisboa, Lisbon, Portugal

RESEARCH GROUP AND URL

Data Science Research Stream: https://magic.novaims.unl.pt/en/about-us/research-lines/

SUPERVISOR (NAME AND E-MAIL)

Flávio Luís Portas Pinheiro (<u>fpinheiro@novaims.unl.pt</u>)

SHORT CV OF THE SUPERVISOR

Flavio L. Pinheiro is an Assistant Professor in Data Science at NOVA IMS – Universidade Nova de Lisboa. He holds a PhD in Physics from the Universidade do Minho (2016) and was a Postdoctoral Associate at the MIT Media Lab (2016-2018). His research applies data, network, and complexity sciences methods to study topics that include information diffusion and social contagion processes, strategic decision-making, local and global network patterns in education, and economic diversification and sophistication patterns. His interdisciplinary work has been published in top-tier journals and conference proceedings in various disciplines, such as Nature Communications, Research Policy, Regional Studies, EPJ Data Science, Physical Review Letters, PLOS Computational Biology, Theoretical Computer Science, Journal of the Royal Society Interface, Structural Change and Economic Dynamics, International Conference on Autonomous Agents and Multiagent Systems, Proceedings of the European Conference on Artificial Life. Moreover, he has experience in applied research projects and consultancies, including work for the World Bank on smart and inclusive economic diversification in several developing economies, for the OECD on promoting improved frameworks for public procurement contracts, and participation in the Bank of International Settlements conference in joint work with the Bank of Portugal.

PROJECT TITLE AND SHORT DESCRIPTION

I am looking to supervise projects in areas related with applied Network and Data Science methods to the study of Economic and Social systems. Below I describe one project example:

1. Smart Strategic Diffusion on Networks of Related Economic Activities.

The success of what we choose to do next is often conditional on what we know. For instance, the difficulty of learning a new skill is certainly conditional on our initial knowledge base. Arguably, it is certainly easier for a Portuguese person to learn Spanish rather than Chinese as languages can be more/less similar in their structure. However, learning Spanish will certainly open different opportunities, perhaps more related, than Chinese. As such, choosing what to learn next is often a strategic decision that requires balancing the costs of learning with the benefits obtained. In this project, we will contribute to a recently growing literature on Knowledge Networks that have been empirically mapping the structures of relatedness between different types of activities — Industries, Occupations, Products, Academic Fields, etc. — given their overlap in related requirements. The goal is to find optimal learning diffusion strategies in such networks in a competitive environment but also, in the context of Economic Diversification, to offer a more comprehensive roadblock for diversification and inclusive economic growth in a competitive landspace.

SCIENTIFIC AREA WHERE THE PROJECT FITS BEST*

Social Sciences and Humanities (SOC) • Economic Sciences (ECO) • Information Science and Engineering (ENG) • Mathematics (MAT) • Physics (PHY)
